Michigan State University

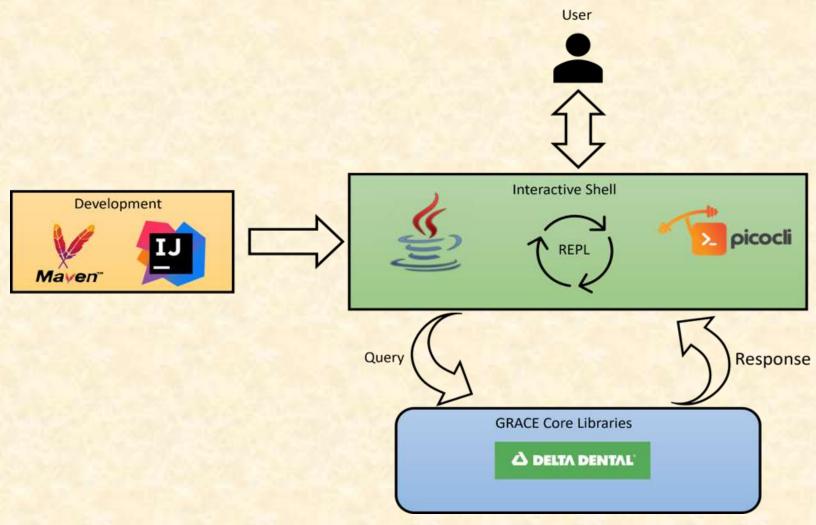

Spring 2022

Project Overview

- The multitude of factors to consider make rate calculation a very convoluted process
- Solution architecture General RAte Calculation Environment (GRACE) and its DSL are aimed to tackle these challenges
- Create a REPL shell to add console level support for GRACE so that anyone can use the tool effectively

System Architecture

Starting and Help Command

```
GRACE-Shell - java - grace - 95×23
david@Davids-MBP GRACE-Shell % ./grace
GRACE>>> label
Usage:
label [-hv] [COMMAND]
Description:
Handles a label command and its various options
Options:
 -h, --help Displays this message.
 -v, --verbose Output more command information.
Commands:
 delete, --delete, -d Deletes the label with the given name
 list, --list, -l Lists all current labels
 spec --spec -s
                       Creates or updates a label depending on whether the
                         name exists
GRACE>>>
```

Some Example Commands

```
● ●
                                  GRACE-Shell — -zsh — 95×23
david@Davids-MBP GRACE-Shell % ./grace
GRACE>>> let DentalProcedure [Premier, Cleaning] = 60.0
DentalProcedure[Premier, Cleaning] = 60.0
GRACE>>> labelmapper list
All label mappers:
PPO => Cleaning
PPO ==> X-Ray
PPO => Tooth Extraction
Premier => Cleaning
Premier => X-Ray
Premier => Tooth Extraction
GRACE>>> label spec Crown 1000.0 1200.0
Creating label: Crown
with values:
1000.0
1200.0
GRACE>>> exit
david@Davids-MBP GRACE-Shell %
```

Importing files

```
GRACE-Shell — java « grace — 80×24
david@Davids-MBP GRACE-Shell % ./grace
GRACE>>> program -i ../test
                                                               . .
                                                                                           GRACE-Shell — vim test — 80×24
                                                              program ls
>>> program ls
                                                               label -l
generated-sources
                                                               let CreatedLabel [val1, val2, val3] = 5
classes
                                                               label spec AnotherNewLabel val4 val5 val6
archive-tmo
                                                               label -1
maven-status
                                                               label -d AnotherNewLabel
maven-archiver
                                                               label -1
GRACE-Shell-0.1-jar-with-dependencies.jar
GRACE-Shell-0.1.jar
CreatedLabel[val1, val2, val3] = 5
>>> label spec AnotherNewLabel val4 val5 val6
Creating label: AnotherNewLabel
with values:
val4 val5 val6
AnotherNewLabel: [val4, val5, val6]
>>> label -d AnotherNewLabel
Deleting label: AnotherNewLabel
GRACE>>>
                                                                 INSERT ---
```

Errors

```
. .
                        GRACE-Shell — java • grace — 79×25
GRACE>>> exit
david@Davids-MBP GRACE-Shell % ./grace
GRACE>>> label spec
Missing required parameter: '<labelName>'
Usage: label spec <labelName> [[<label_values>]...]
Creates or updates a label depending on whether the name exists
If no label values are included, displays the label
      [[<label_values>]...]
GRACE>>> program -i -e file
Error: expected only one match but got [[-f] file to import/export (-i | -e)]={
--import} and [[-f] file to import/export (-i | -e)]={params[0]=file --export}
Usage: program [-v] [[-f] file to import/export (-i | -e)] [COMMAND]
      file to import/export
  -e --export
  -f --force
  -i, --import
  -v --verbose
Commands:
  clear cls
  ls -l
GRACE>>>
```

What's left to do?

- Features
 - Function and Script collisions
- Stretch Goals
 - Intercepting and interpreting Picocli/GRACE errors
- Other Tasks
 - Document non-command functions
 - Clean up codebase
 - Fix deployment issues on windows
 - Consistent output styling (format and coloring)
