Team Auto-Owners

[1 of 16]

- **Auto-Owners**

- Established in 1916
- Auto-Owners Insurance is rated A+ (Superior) by AM Best and are a Fortune 500 company
- The company is represented by 48,000 licensed agents in 26 states
- The company provides a wide range of insurance products including life, home, auto, and business insurance
- It offers personal and commercial property/casualty and life insurance products to approximately 3 million policyholders

INSURANCE

Project Functional Specifications

[2 of 16]

- **Transformative Tool for Workforce Management:** Streamlines and enhances how organizations manage and develop their workforce.
- **Comprehensive Data Entry and Management:** Integrates data entry, advanced management features, and reporting tools.
- **Integrates AI:** to optimize work-flow and candidate selection.
- **Empowers Leaders:** Enables strategic planning and optimization of talent management processes.
- **Proactive Employee Development:** Helps align employee skills with future organizational goals by fostering growth and identifying potential.

Project Design Specifications

[3 of 16]

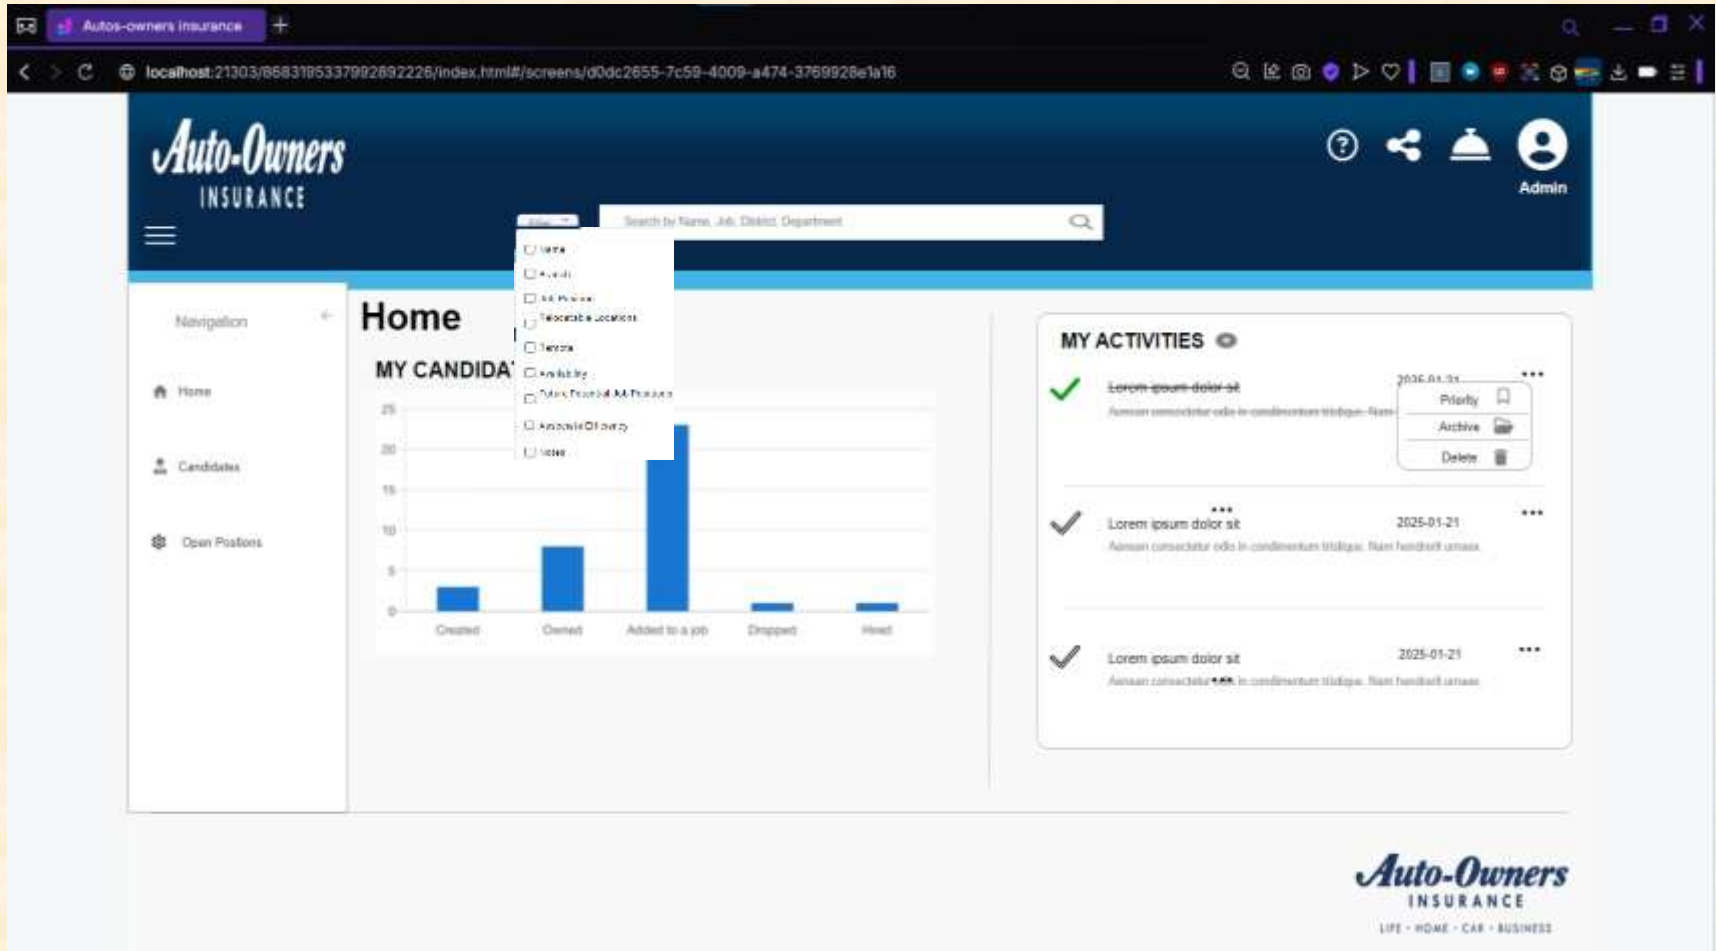

Overall Design:

- **User-Centric Design:** Clean layout with easy navigation and efficient workflow for all application pages.
- **Responsive and Adaptive:** Tailors functionality for various user roles from supervisors to vice presidents.
- **Visual and Interactive Elements:** Employs graphical dashboards, and interactive elements to facilitate user engagement and decision-making.
- **Comprehensive Candidate and Position Management:** Provides clear, detailed views of candidates and position overviews for easy access and understanding.
- **Advanced Filtering and Search:** Efficiently sifts through the employee database with comprehensive filters to identify suitable managerial candidates..
- **Dynamic Reporting and Analytics:** Features bar graphs and AI-generated summaries for insight into recruitment and candidate fit.
- **AI Integration:** Matches candidates with positions using AI, displaying match percentages and recommendations to optimize recruitment.

Project Technical Specifications

[10 of 16]

AOTM Implementation Strategy

- **Angular-based Web Application:** Our team will use Angular to develop a responsive, single-page application that optimizes user experience and load times.
- **Use of Spring Boot 3:** Simplifies backend processes by managing database transactions and reducing redundant code with Microsoft SQL to ensure data security.
- **Microsoft SQL for managing data:** Leverage robust querying capabilities to sort and query candidates with specific criteria. It can also be used to facilitate real-time updates for pages enabling features such as dynamic content rendering.

Project Technical Specifications

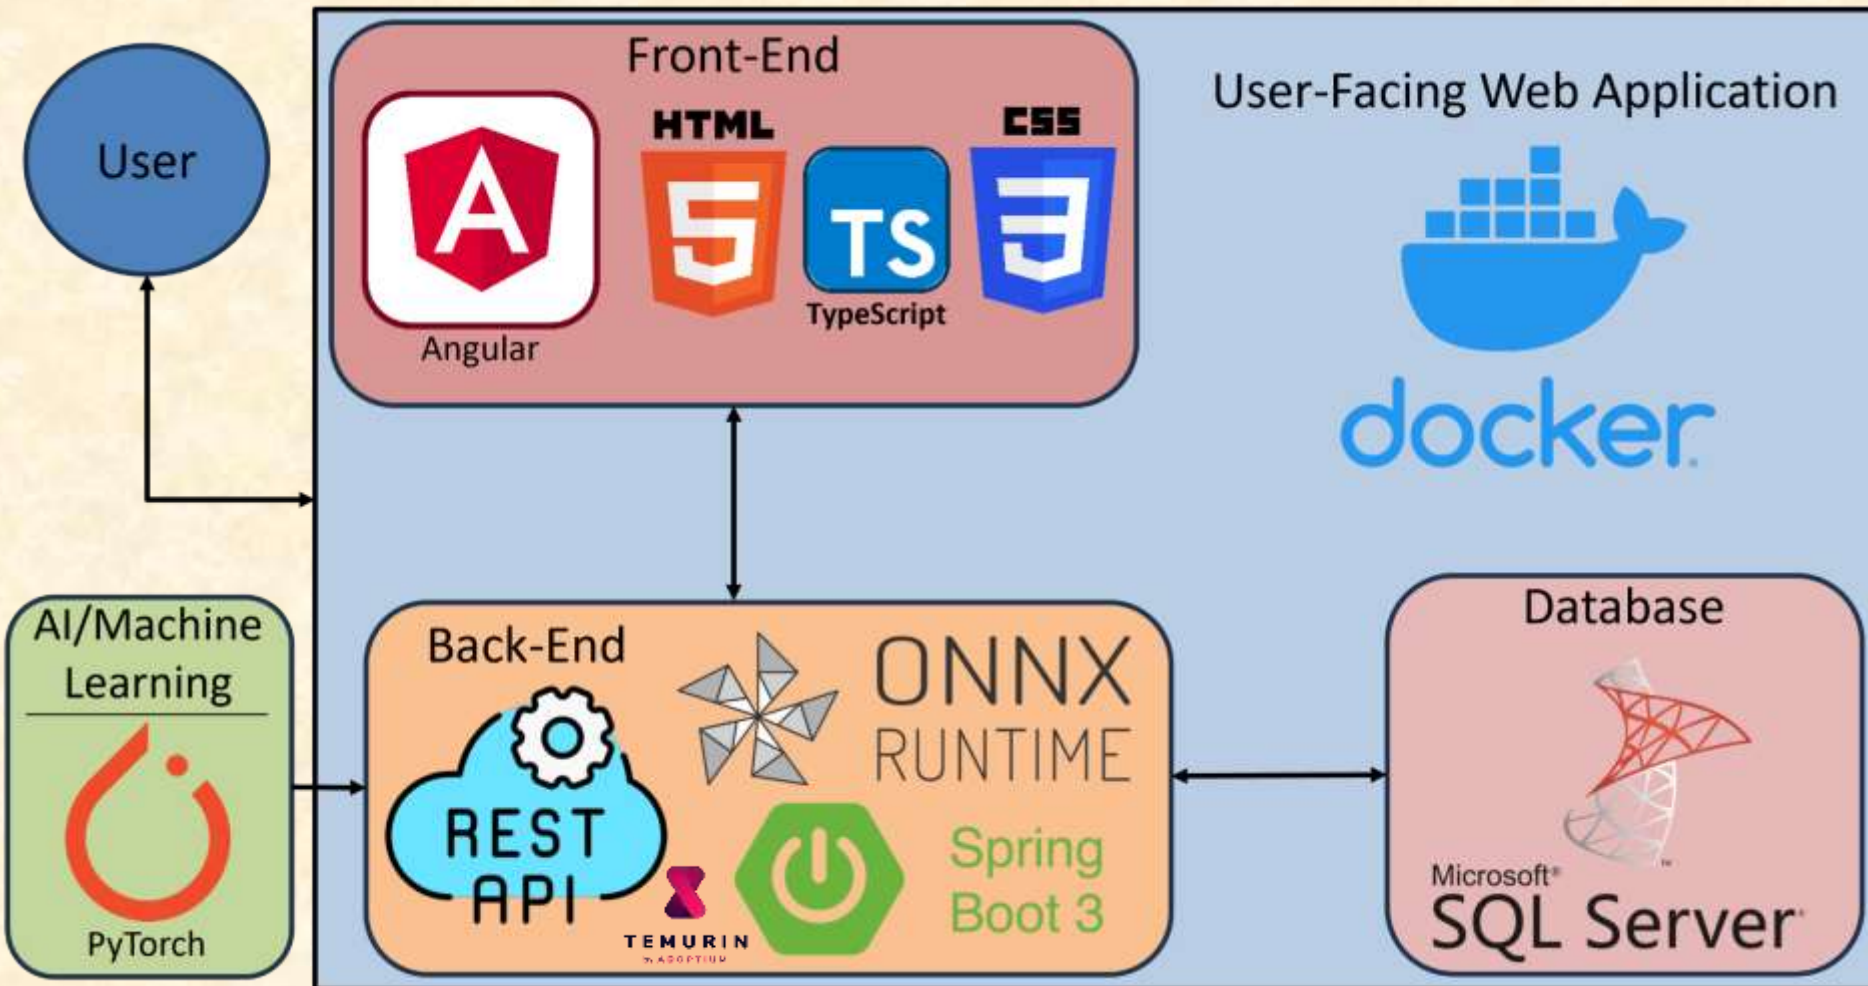

[11 of 16]

- **Integration of RESTful APIs:** Facilitates secure and efficient data communication between the front-end and back-end.
- **Machine Learning with PyTorch and ONNX Runtime:** Implements machine learning models to rank and summarize candidate data effectively, optimized for performance with ONNX Runtime.
- **Docker for Deployment Consistency:** Ensures that our application runs consistently across all environments by containerizing the AOTM software.

Project System Architecture

[12 of 16]

Front-End Technology

- **Angular Framework:** Enhances UI with dynamic single-page applications for better responsiveness and reduced load times.
- **Node.js:** Provides efficient development with live page reloading.
- **HTML, TypeScript, CSS:** Supports scalable and maintainable UI design.

Back-End Technology

- **Spring Boot 3:** Utilizes the Adoptium Temurin JDK for streamlined transaction management and reduced boilerplate code.
- **Microsoft SQL Server:** Manages secure data storage and processing.
- **REST Endpoints:** Enables efficient data transfer within the web application, integrating machine learning insights into candidate management.

Machine Learning Integration

- **Model Training with PyTorch:** Utilizes extensive data sets for training machine learning models.
- **ONNX Runtime:** Ensures model optimization for enhanced performance and reduced latency.

Project Risks

[16 of 16]

Use of AI

- **Description:** Auto-Owners requested AI integration in the application, potentially requiring paid software and substantial data and computational resources for model training.
- **Mitigation:** We will collaborate with our sponsor to define a feasible AI strategy and explore cost-effective AI solutions.

Compatibility Challenges

- **Description:** Our team must establish a connection between the Microsoft SQL Server and the Angular frontend using Spring Boot and REST APIs, which involves significant preliminary setup.
- **Mitigation:** We will adhere to a strict schedule to ensure all preparatory tasks are completed, enabling the integration of these components.

Complex UI/UX requirements

- **Description:** A complex UI may cause performance problems, implementation difficulties, user confusion, and increased security vulnerabilities.
- **Mitigation:** We will perform iterative usability testing and collaborate with our sponsors to optimize and simplify the UI. We will also investigate API security to prevent vulnerabilities.
