Spring 2025

Project Sponsor Overview

- Created by a merge of Spectrum & Beaumont Hospitals
- 22 Hospitals with over 65,000 Employees
- Working with Dr. Holman and MSU Medical Students

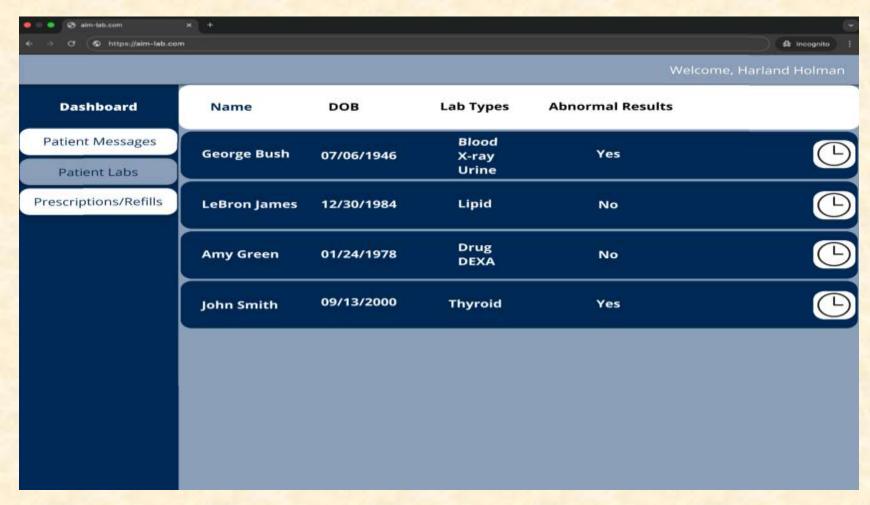

Project Functional Specifications

- Patients can communicate with doctors directly
- Students have a lack of education in basket management
- Train students to use EHRs and efficiently respond to patient messages
- Use AI to generate questions based on patient data and give feedback to responses

Project Design Specifications

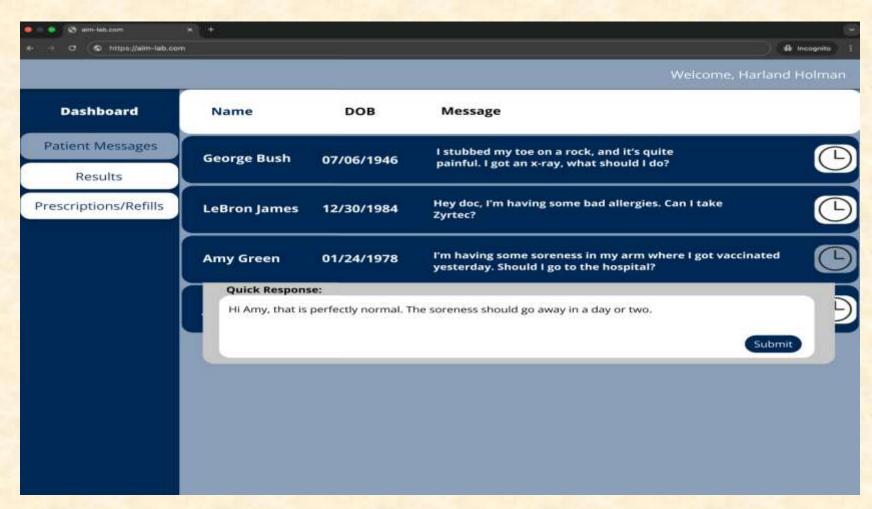

- Simulated EHR Interface: An interactive interface resembling real-world EHR systems
- Task-Based Training: Students will manage test results, prescriptions, and patient messages
- Al-Powered Responses: Utilizing OpenAl's LLM API to craft an optimized response for reference
- Secure Authentication: Ensures role based access for students and instructors

Screen Mockup: Lab View

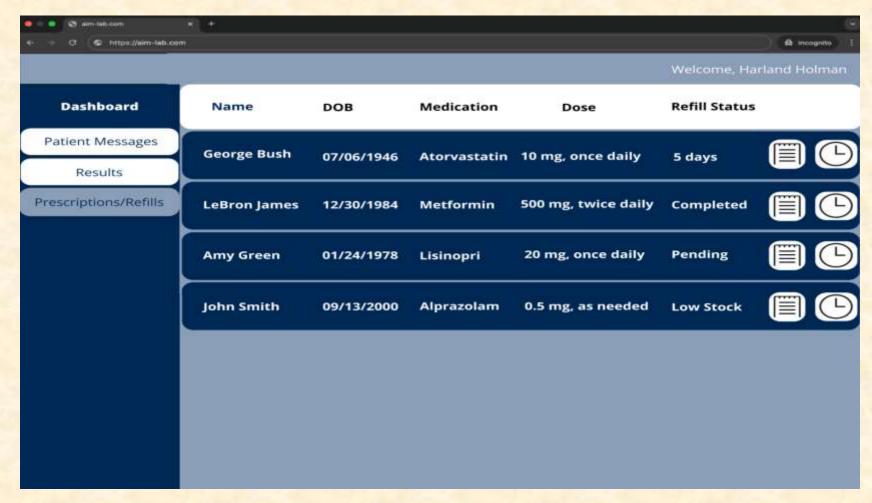

Screen Mockup: Student Dashboard

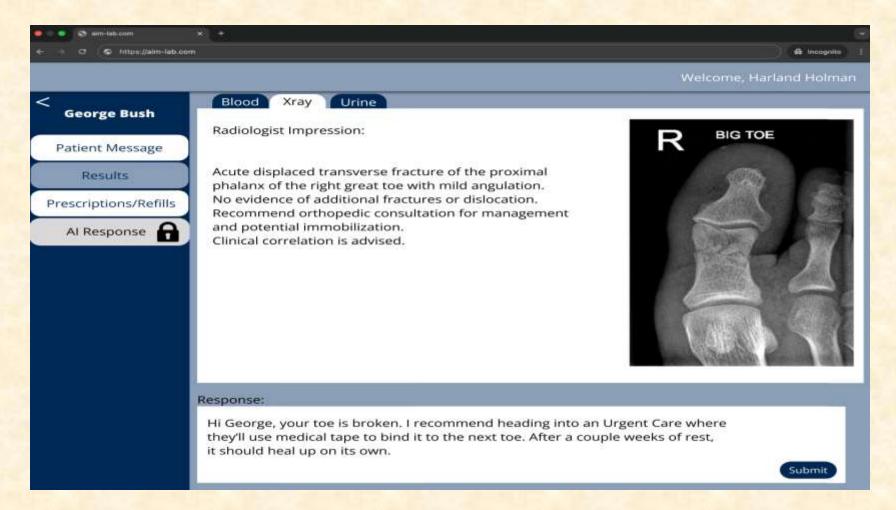

Screen Mockup: Prescription View

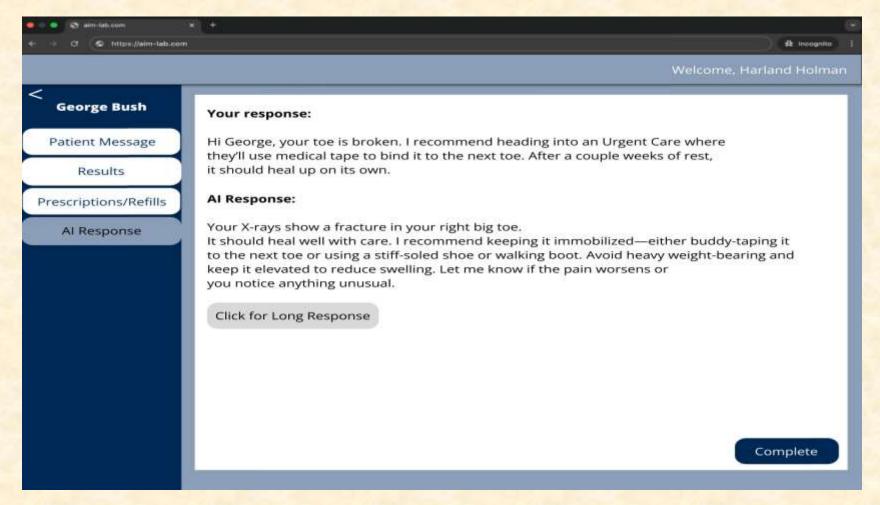

Screen Mockup: Lab Detail View

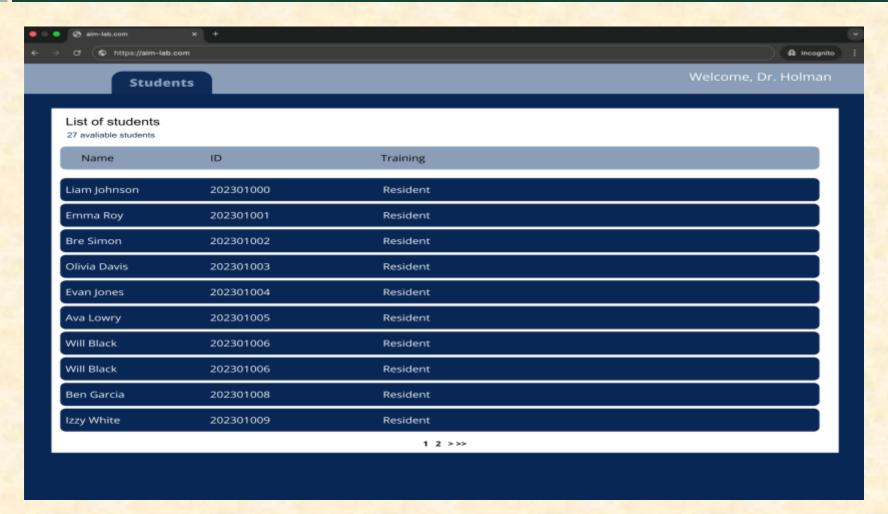

Screen Mockup: Al Response

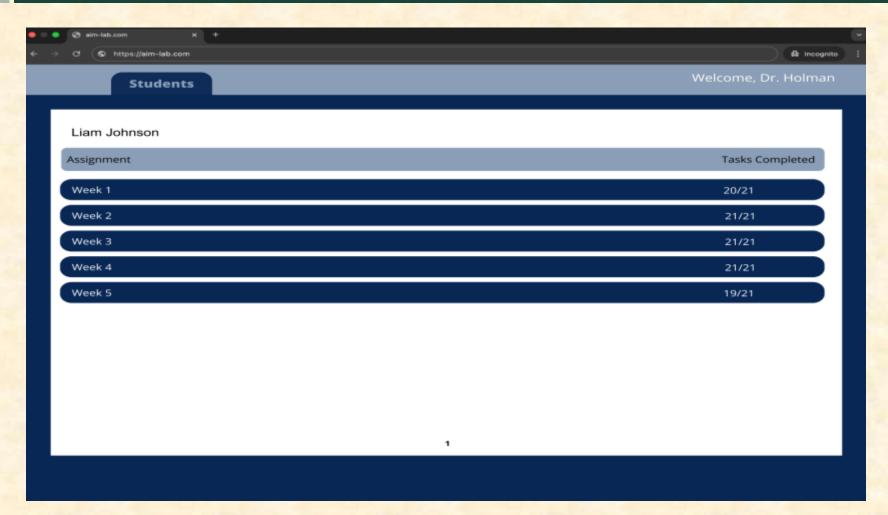

Screen Mockup: Instructor Dashboard

Screen Mockup: Student Detail View

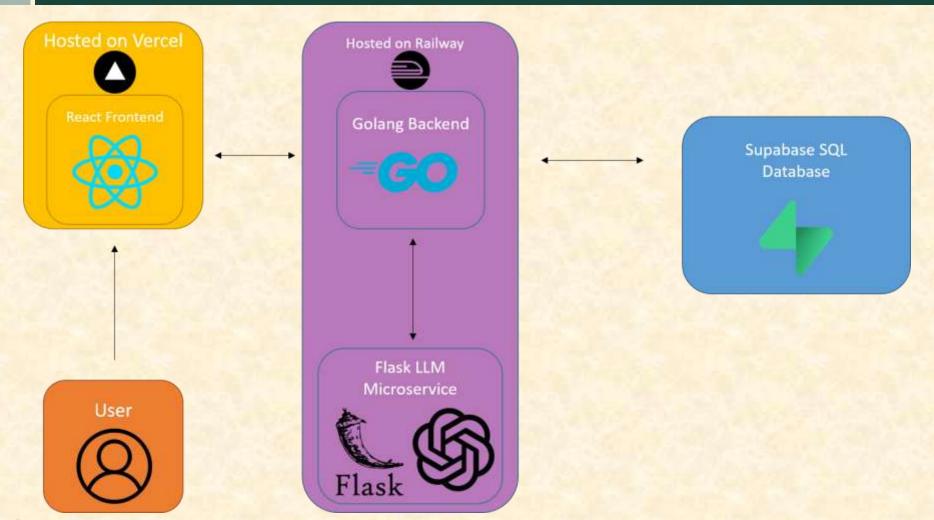

Project Technical Specifications

- Create a basket management system within an **EHR** application
- Al Element to give students reference on plan & assessments
- Create student & instructor views for task & grade analysis
- Order system for prescriptions & other medical needs

Project System Architecture

Project System Components

- Hardware Platforms
 - Not Applicable
- Software Platforms
 - Frontend: React.js
 - Backend: Golang & Flask
 - LLM: OpenAl
 - Database: Supabase

Project Risks

- Risk 1
 - Restricted access to MIMIC-III Database
 - Wait for access or use Al generated patient data
- Risk 2
 - Restricted access to Med-PaLM LLM
 - Use OpenAl LLM if no access
- Risk 3
 - Accurate LLM feedback for medical information
 - Retrain the LLM on approved feedback from sponsor
- Risk 4
 - Hosting on JIT Medicine website
 - Offer other hosting options & cost breakdowns
